

Lift Maintenance in Hampshire

Hampshire is the largest county in the South East of England, with 13 local councils, one of which is Winchester City Council. The city council manages a wide range of properties in central Hampshire, including Winchester and several of Hampshire's market towns, such as Alresford, Bishop's Waltham, and Wickham.

In 2025, Jackson was given the opportunity to tender for Winchester City Council's Lift Services Contract. The contract forms part of a framework agreement set up by the London-based National Framework Partnership.

As with most tenders of this kind, a pre-qualification process was needed to substantiate Jackson Lift Services' capability and experience of working with local councils. Fortunately, as a business with over four decades of successfully maintaining lifts for customers across multiple sectors, including those in the public sector, we have ample examples and references to support our submission.

With the pre-qualification submissions undertaken, Jackson submitted our competitive tender response for the City Council's Passenger Lift Services contract, which falls under a Framework Agreement managed by the National Framework Partnership. The contract relates to a range of hydraulic, traction, and platform lifts of varying ages installed in various public buildings and in occupied residential properties.

Shortly after our tender submission, we were delighted to be informed that we had been awarded the Passenger Lift Services contract for Winchester City Council. This contract now forms part of our national portfolio of local authority and government lift maintenance and modernisation contracts that span the entire length and breadth of the UK.
